

## “Unipolar Biomagnetic Therapy Appliance”

## ABSTRACT OF THE DISCLOSURE

[0043] Three steel rods are formed into a shape for a collar, necklace, anklet or belt, with  
5 one rod disposed between the other two rods. The middle rod has a larger radius of  
curvature than the top and bottom rods, and a plurality of rare earth magnets are placed  
between the middle rod and the outer rods. Each magnet is oriented such that all of the  
magnets have their same polar ends pointed towards the top and bottom rods. The magnets  
are bonded to the rods using a magnetically conductive material, to form a magnetic circuit  
10 which produces a unipolar magnetic field along the top and bottom rods towards the center of  
the U-shaped appliance such that the wearer of the appliance may receive unipolar  
biomagnetic therapeutical benefits of the magnets.
